

# ELOTEST PL.E

## ROHMANN - PROVEN IN THE PRODUCTION LINE

The ELOTEST PL.E is a compact universal instrument for fast test procedures during the manufacture of semi-finished products. It offers the same performance as the ELOTEST PL.1, but is limited to two channels and works autonomously or in conjunction with a host computer, PC or SPC.

The ELOTEST PL.E is mainly used to detect cracks on, or sort, mass-produced parts, inspect continuous materials such as wires, rods and tubes and to do lab work in all areas of eddy current technology.

With its direct functions, digital turning knob for "quasi-analogue" setting, clear-text guided menu and its option to store parameter settings, the ELOTEST PL.E is easy and reliable to operate.
